

want to reduce the risk of incidents at your site? don't wait for injuries to happen before you take action!

Fitting MINECOM's DACS600 Personnel and Vehicle Detection System to your heavy vehicle fleet can prevent unnecessary incidents by letting operators know when plant and personnel are nearby. Using active RFID technology, the DACS600 alerts the driver audibly and visually in both surface and underground environments, providing seamless protection for your assets.

How does it work?

When activated, each DACS600 searches constantly for active tags in the area. When tagged assets come into range, the DACS uses a pulsed alarm and flashing LED display to alert the operator, with digital readouts telling them how many vehicles and personnel are close by. The system uses UHF RFID tags operating at 403Mhz, delivering strong RF penetration and superior warning distance, even around corners!

- > Reliable early warning
- > Detects multiple moving & static objects
- > Protection in both surface and underground environments

ask the Minecom team how you can prevent accidents BEFORE they happen!
